

USER MANUAL

How to use Cullinos

A practical guide for restaurant owners and staff —
from first login to daily service.

Cullinos

Restaurant Operating System · by Rkyves
Owners · Managers · Cashiers · Waiters · Kitchen

START HERE

Your daily portals

Role	Open this URL	Login with
Owner / manager	https://admin.cullinos.com	Owner email from onboarding
Cashier	https://pos.cullinos.com or Admin → Portal POS	Cashier staff account
Waiter	https://waiter.cullinos.com	Waiter staff account
Kitchen	https://kds.cullinos.com	Kitchen / staff login
Guests	https://order.cullinos.com/org/outlet	No login required
Multi-outlet	https://manage.cullinos.com	Owner (Enterprise)

Forgot password: use [/forgot-password](#) on Admin or ask your owner to reset staff in Admin → Staff.

1. First-time owner setup

1

Log in to Admin

Open admin.cullinos.com with the owner email and password from onboarding.

2

Complete Setup wizard

Choose business type (e.g. Restaurant), enter GSTIN if you have one, and finish the guided steps.

3

Build your menu

Admin → **Menu**: create categories, then items with prices. Toggle availability when an item sells out.

4

Add tables

Admin → **Tables**: create floor tables (e.g. T1, T2) so Waiter can take dine-in orders.

5

Invite staff

Admin → **Staff**: add a Waiter and a Cashier, assign your outlet, share passwords securely.

2. Taking orders — Waiter (dine-in)

1

Open Waiter

waiter.cullinos.com → log in → select outlet → see the table grid.

2

Open a table

Tap a table → add menu items → confirm. Note the order number.

3

Optional: guest QR

Use **Show QR to customers** so guests order on their phones into the same table ticket. End the session when the table clears.

4

Kitchen sees it

KOTs appear on KDS (kds.cullinos.com) within seconds.

3. Taking orders — POS (counter / takeaway)

1

Open POS

pos.cullinos.com as Cashier — or Admin → **Portal POS** (/pos) if you have POS access.

2

Build the cart

Tap items, set order type (e.g. takeaway), check subtotal.

3

Hold if needed

Hold an order to free the screen; resume later from the held panel.

4

Checkout

Confirm the quick order. It shows in Admin → Orders and on KDS.

4. Online & QR guest ordering

1. Share <https://order.cullinos.com/your-org/your-outlet> or the waiter QR link.
2. Guest browses menu → cart → checkout with name & phone.
3. Prefer **Pay later** unless Razorpay is configured for Pay now.
4. Verify the order in Admin → **Orders**.

Customer login is optional — guests can always checkout without an account.

5. Kitchen & Order Display

Kitchen Display

Open kds.cullinos.com (or Admin → Kitchen Display launcher). Tickets update live as orders arrive. Mark items as you cook.

Order Display

Admin → **Order Display** (/cbs). Copy the public board URL to a tablet/TV so guests see Preparing → Ready.

6. Back office essentials

Need to...	Go to
Change prices / 86 an item	Admin → Menu
See today's orders	Admin → Orders
Check stock	Admin → Inventory
Add a recipe	Admin → Recipes
Schedule production	Admin → Production
Loyalty / CRM	Admin → Loyalty / Customers
Send a promo	Admin → Promo Email
Delivery list	Admin → Delivery
Sales reports	Admin → Reports
Subscription / invoices	Admin → Billing
Kiosk / storefront link	Admin → Digital Ordering

Some pages (Banquets, Brands, Guests, Rooms) appear only for matching business types / plans.

7. Multi-outlet (Enterprise)

1. Open manage.cullinos.com with the owner login.
2. Review network KPIs on Overview.
3. Compare outlets or create stock transfers when you have 2+ outlets.

8. Tips & good habits

- Create staff accounts per person — don't share the owner login on the floor.
- Keep menu availability updated so guests never order sold-out items.
- End QR table sessions when guests leave so old links stop working.
- Use Incognito when testing the customer storefront as a guest.
- Never put real passwords in shared spreadsheets or chat.
