Cullinos QA — Employee Brief

Role: Manual QA Tester (Production)
Duration: ~4 days (6–8 hours per day)
Environment: Production (cullinos.com)

Your goal

Test all **232 test cases** on the live Cullinos platform. Record results in Excel. Log every failure with steps and screenshots. Return completed work to your team lead.

Use **COMPLETE_FEATURE_TEST_GUIDE.md** for click-by-click steps on every page.

Read **Whats_New.pdf** first for features added in this cycle.

What you will receive

#	File	Purpose
1	Whats_New.pdf	New features checklist — read first
2	QA_Tester_Handbook.pdf	Step-by-step instructions
3	Quick_Reference_Card.pdf	1-page desk reference
4	TEST_RUN_SHEET.xlsx	Mark Pass / Fail / Blocked / N/A for each test
5	BUG_LOG.xlsx	One row per bug found
6	CREDENTIALS_LOG.xlsx	Record URLs, slugs, IDs (no real passwords)

Your team lead will also share **Super Admin login** securely on Day 1.

Daily schedule

Day	Work	Deliverable
1	Health checks, create test restaurant, menu, tables, Waiter + Cashier	Phase 0 + 1 rows filled in Excel
2	Waiter, POS, KDS, guest checkout, CDS, Portal POS	Phase 2 rows filled
3	Admin modules (including new pages), Management, Super Admin	Phase 3 + 4 + 5 rows filled
4	Marketing website, Swagger API tests, sign-off	Phase 6 + 7 rows filled; all files returned

Your deliverables (end of Day 4)

1. **TEST_RUN_SHEET.xlsx** — all 232 test cases marked; Summary and Sign-off sheets complete
2. **BUG_LOG.xlsx** — every Fail has a bug row with steps, expected, actual, screenshot path
3. **CREDENTIALS_LOG.xlsx** — org slug, outlet slug, outlet ID, emails (password refs only)
4. **evidence/** folder — PNG screenshots named like `BUG-001-screenshot.png`
5. Zip all of the above and send to team lead

How to mark results

Result	When
Pass	Feature works as the handbook describes
Fail	Wrong behavior — **must** add a bug row + screenshot
Blocked	You cannot run the test (no access, URL down, etc.)
N/A	Test does not apply (e.g. Razorpay without keys, Banquets on restaurant tenant)

Rule: Mark tests the **same day** you run them. Do not leave rows blank.

When to escalate (ask team lead)

- Super Admin login does not work
- Health check URLs return errors
- "Failed to fetch" on login pages
- You cannot create tables and Waiter shows empty grid
- POS or KDS production URL does not load
- Swagger returns 401 after following the JWT guide
- Unsure if something is a bug or a known limitation

Mark the test **Blocked** and message your team lead. Do not mark **Pass** if unsure.

What NOT to do

Do not	Why
Put real passwords in Excel, email, or chat	Security policy
Suspend or delete **real customer** tenants	Use QA test tenant only
Publish marketing CMS changes to live site	Needs team lead approval
Skip Fail tests without logging a bug	Every Fail needs a BUG_LOG row
Test on demo/local accounts for final sign-off	Production fresh tenant required

---

Known limitations (not bugs)

These are expected. Mark **N/A** or note in bug log as "Known limitation":

- **Pay now (Razorpay)** needs payment keys — use Pay later
- **Outlet comparison** needs 2+ outlets
- **Banquets / Brands / Guests / Rooms** often hidden on restaurant business type
- Marketing CMS **publish** needs team lead approval

Admin **Tables**, **Inventory**, and hosted **POS/KDS** are real features — failures there are bugs.

Full list is in the Tester Handbook Section 11.

Skills needed

- Basic web browsing (Chrome)
- Using Excel (dropdowns, filling rows)
- Taking screenshots (Windows: Win+Shift+S)
- Following written step-by-step instructions
- Optional: opening Swagger and copying a login token (handbook Section 9)

No coding required. Swagger section has a beginner-friendly guide.

Contact

Your team lead is your first point of contact for access, blockers, and sign-off review.

Quick start (first 30 minutes)

1. Read Whats New + Quick Reference Card
2. Open health URL — confirm API is up
3. Login to Super Admin (credentials from team lead)
4. Onboard test restaurant (enterprise plan)
5. Login to Admin as owner — start onboarding wizard

Full steps: **QA_Tester_Handbook.pdf** Section 5.
